Infrabooking App

Introduction

Organizations, businesses, and institutions often struggle with managing shared infrastructure such as meeting rooms, auditoriums, sports facilities, labs, or equipment. Manual booking processes lead to inefficiencies, double-bookings, underutilization, and frustration among users.

Software's:

1. Visual Studio Code
2. Node 24.x
3. Jest , supertest
4. MySQL 8.x with workbench
5. Postman
6. React

Actors:

Administrator: - He has authority to add new Room, edit room, delete Room, cancel booking

Employee: - He can perform booking, cancel booking, view all booking

REST API specifications:

Sr No	URL + Method	Status Code	Cookie	Request Body	Functionality	Response Body	ROLE
